

Toggl – Where Every Second Drives Results

At AVS, we know that growth demands clarity, especially when it comes to how your team spends its time.

Introduction

At AVS, we know that growth demands clarity, especially when it comes to how your team spends its time. As your company scales, visibility into workflows, project costs, and productivity becomes essential.

That's where Toggl comes in.

Whether you're a CEO juggling departments or a team lead chasing deadlines, Toggl helps you track time effortlessly, uncover inefficiencies, and make smarter decisions, faster. This guide will walk you through setting up Toggl and turning it into your organisation's time intelligence system.

Let's dive in!

What is Toggl & Why Your Team Needs It

Toggl is a simple but powerful time tracking tool that helps teams and leaders understand how time is spent by project, task, and person. It turns hours into insight and helps you improve everything from billing to bandwidth planning.

Instead of guessing where the time goes, Toggl shows you - clearly and in real time.

Setting Up Toggl: A Step-by-Step Walkthrough

3

1

Create Your Workspace

1. Visit toggl.com and sign up
2. Name your workspace (e.g., AVS HQ or [Your Company Name])
